Art Unit: 2622

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 3 and 4, drawn to a solid state image pickup device, classified in class 348, subclass 311.

II. Claims 5 and 7, drawn to a camera including a solid state image pickup device, classified in class 348 subclass 222.1.

The inventions are distinct, each from the other because of the following reasons: The inventions of Group I (a structure of an image sensor) and Group II (operations of an electronic camera) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions of Group I and Group II are unrelated.

2. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
